

SWET PATEL

✉ swet2706.work@gmail.com | 📍 Ahmedabad, Gujarat | 🌐 [\[Portfolio\]](#) | [in \[LinkedIn\]](#) | [🔗 \[GitHub\]](#)

Profile Summary

Hands-on Computer Science undergraduate specializing in full-stack JavaScript/TypeScript, Python, and AI engineering. Experienced in building production-style applications, multi-tenant architectures, and Docker environments. Proven track record developing autonomous agents and orchestrating generative workflows via the Vercel AI SDK and LLM APIs. Eager to bring a clean coding approach to an AI-first development team.

Education

Indus University — B.Tech in Computer Science and Engineering	July 2023 – June 2027
Gayatri Vidhya Vihar — Higher Secondary Education	June 2021 – May 2023
S.D.A. Higher Secondary School — Secondary Education	Till May 2021

Technical Skills

Programming Languages:	JavaScript, TypeScript, Python, SQL, HTML, CSS, PHP, C++
Web Technologies:	React.js, Node.js, Express.js, Django, Flutter
Databases:	PostgreSQL, MongoDB, MySQL
Developer Tools:	Git, GitHub, Docker, Supabase, Vercel, Bun, Commander.js
Core Concepts:	Computer Networks, Object Oriented Programming (OOP), REST API, DBMS, Operating Systems

Projects

devclaw-cli — *Bun, Vercel AI SDK, Commander.js, Telegraf* [\[View Code\]](#)

- Developed an autonomous terminal-native agent utilizing the **Bun runtime** and **Commander.js** layout engine.
- Integrated the **Vercel AI SDK** with the **OpenRouter API** to orchestrate generative code streaming and file diffing.
- Engineered a secure **Safe Staging Architecture** with strict path-traversal prevention to safely isolate workspace modifications.
- Implemented dual interfaces featuring an interactive CLI via **Clack Prompts** and a remote **Telegram Bot adapter** with inline approval buttons.

Expense Approval System — *Full-Stack TypeScript, Prisma, Docker* [\[View Code\]](#)

- Engineered a multi-tenant corporate expense platform supporting multi-step approval workflows (Employee to Manager to Admin).
- Enforced robust backend data isolation for company schemas alongside strict schema validations using **Zod** and **Prisma ORM**.
- Containerized microservice environments using **Docker Compose** for local database replication and environment hot-reloads.

CryptoPulse — *Flutter, Live API Streams, State Persistence* [\[View Code\]](#)

- Built a real-time cryptocurrency tracking application via **Flutter** rendering live feeds for leading assets.
- Rendered interactive, hardware-accelerated trend lines using **fl_chart** and parsed custom RSS streams for live media delivery.
- Established local data caching and state synchronization using **shared_preferences** to retain personalized user configurations.
